

Front-end development: Basics

JavaScript – grade assigner

The following exercise contains the following subjects:

- conditional statements

Instructions

create a prompt that asks the user for his/her grade, in the form of a letter.
Check the letter and capitalize it.

Console log the score according to the letter:
score of:

0-64 is a “F”
65-69 is a “D”
70-79 is a “C”
80-89 is a “B”
90-100 is an “A”

create the same prompt but for the other way around – insert number and get back the letter.

For both prompts – alert if the input is invalid (not a letter or a letter not a-f in the first, and not a number or a number not in the allowed range in the second).
